

WR GOLIATH TUBE BASS EMPHASIZER

Control and Indicator Light Layout – Faceplate

Controls and In/Out Connections – Top of Unit

WR Goliath Tube Bass Emphasizer

The **Goliath Tube Bass Emphasizer** is an exciting new development for bass players wanting the richer, enhanced tonality associated with tubes.

This unique and innovative design is based on a specialised and limited availability ECC86 NOS tube, optimized to operate on 24 Volt DC, to create wonderful tone in a limited-edition, hand-built unit.

No bass pedal board should be without one!

Equally effective across the frequency range (20 Hz – 16 KHz), from low-level to LOUD, the quality of the sound is consistently high, allowing the same amazing sound on stage as achieved in the studio. Tone controls and switches allow to create unique sounds, thanks to the way they interact together. The Goliath will **not** change the basic sound of your Bass Guitar(s) as other preamps often do. This unit is also wired for “true bypass” operation.

Description

- The **Goliath Tube Bass Emphasizer** was created as a way of adding the warm harmonic sounds associated with the use of tubes to set-ups using solid-state amplifiers: to ‘push-up’ the sound.
- This unit is powered by a **12 Volt DC** power supply and operate internally with 24 Volt – as required by the tube. This special feature of this pre-amp ensures user safety because there is no high voltage on interior or exterior.
- The Goliath has been designed to give the best results: a great sound from a robust and easy to use product. The construction methods and components used are selected only for their high quality and the positive effects they contribute (paper in oil capacitors).
- The Goliath is not a mass-produced product. The components are carefully checked, and then each unit is assembled individually, using point-to-point (hand soldered) connections.
- All these steps combine to create a limited edition, hand-built pre-amp of the highest quality that will enhance the sound of any bass guitar setup.

Features

- The **Goliath Tube Bass Emphasizer** allows you to get the warm harmonic sound of an electron tube, combined with a little more compression and, if necessary, a higher output volume (controlled by the Sensitive switch).
- The Goliath can also be used as standalone unit, for example as a direct plugin to a mixing table or a recording unit etc. (Note: In this case take care to use a DI-box) or use the new developed “WR Goliath Tube Emphasizer DI” the model with integrated DI Box.
- The “**Tone controls**” Treble, Middle and Bass allow you to have a good overall sound control, with a good basic Bass sound. The output sound is created by the combination of the settings of all three controls: the frequencies affected by each control are changed somewhat by the settings of the other controls. This allows more frequencies possibilities.
- The “**Sensitive potentiometer**” that continuously controls the input gain useful for adjusting active and passive bass.
- The “**Deep switch**” increases and slightly changes the Bass frequency.
- The “**True Bypass Footswitch**” allows you to switch the unit between active and passive mode.
- Reverse polarity protection.
- All components are individually selected and are carefully checked before installation.

A respected Bass player has said

*"This unit gives me a warm harmonic sound and the dynamic range over all frequencies of the **WR Goliath Tube Emphasizer** is amazing. I won't play without it; it gives a pure sound to my 'solid state' amplifier and even improves the sound of my tube amplifiers!"*

Operation

- 1) Connect the **Goliath Tube Bass Emphasizer** using the "**JEC Output**" to the Input of your power amp or DI-box.
- 2) Turn the Volume potentiometer of the Goliath to '0'
- 3) Plug the AC/DC power adapter into a 100 - 240 Volt supply and then connect the lead from the adapter into the DC socket of the Goliath.
- 4) Plug your Guitar into the Input of the Goliath.
- 5) Enjoy.

* When turning the „Sensitive Potentiometer“, you may occasionally hear a kind of rasping noise (wiper scratch). This is no technical deficiency, but due to the high sensitivity of the unit. I have taken care to leave out all components not absolutely necessary, to keep the basic sound of the bass as authentic as possible .

Hardware

- Robust Die cast Aluminium Enclosure.
- **Tube:** **ECC86** or 6GM8 (Russian designation), tube designed to work optimally under 30 Volts.
- A "**Sensitive Potentiometer**"
- A "**Deep switch**"
- A "**Bypass switch**"
- Oversized oil film (Paper in Oil) capacitors for improved tone.
- Large Potentiometers.
- Point to point wiring (hand soldered).
- Power supply 100-240 Volt AC to **12 Volt** DC 1 Amp.
- Reverse polarity protection.

Package

The package contains:

- 1x **WR Goliath Tube Bass Emphasizer**.
- 1x power supply (100 - 240 Volt AC to 12 Volt DC 1 Amp).
- Operating Manual/Instructions.

Functionality checks/Problem Solving

- If all LEDs; Power LED (Blue); Switch LED (Red) and logo backlight LED are lit then the unit is working correctly.
- If the Power LED (blue) is not working, there could be a problem with the current supply. Please check the power supply and take a look at the electric poles: + (plus) has to be on the inside, - (minus) on the outside of the jack. (see picture)
- If the Bypass LED is not lit there may be a problem with the tube heating circuit.
- If a tube replacement is necessary be sure to use only exactly an ECC86 or 6GM8 (Russian designation) type - no other tube types are suitable and will destroy other electronic components in the pre-amp. If you are unable to find an appropriate tube, contact us. I will send you a tube as soon as is possible.

Technical data

- Weight: 880 g
- Length: 19 cm
- Width: 13,5 cm ?
- Overall height: 8.6 cm
- Voltage range: 24V DC
- Power consumption: max. 380 mA
- Frequency range: 20 Hz – 16 KHz
- Input impedance: 1 MOhm
